

Modular Potentiometers with Cermet (P11) or Conductive Plastic Elements (PA11)

FEATURES

- CECC 41300
- GAM T1
- P11 version for industrial and military applications
- PA11 version for professional audio applications
- Trimmer version T11/TA11 (see document No. 51021)
- Miniature module size: 12.5 mm square - low current compatibility
- Five shaft diameters and 12 terminal styles
- Multiple assemblies - up to seven modules
- Shaft and panel sealed version
- Up to twenty-one indent positions
- Switch modules
- Concentric shafts
- Custom designs

VERSATILE	MODULAR	COMPACT	ROBUST
-----------	---------	---------	--------

ELECTRICAL SPECIFICATIONS			PA11	P11
Resistive Element			Conductive plastic	Cermet
Electrical Travel			270° ± 10°	270° ± 10°
Resistance Range*	Linear Law		1 kΩ to 1 MΩ	20 Ω to 10 MΩ
	Non Linear Law		470 Ω to 500 kΩ	100 Ω to 2.2 MΩ
Tolerance	Standard		± 20 %	± 20 %
	On request		-	± 5 % or ± 10 %
Power Rating	Linear Law		0.5 W at + 70 °C	1 W at + 70 °C
	Non linear Laws		0.25 W at + 70 °C	0.5 W at + 70 °C
	Multiple Assemblies		0.25 W at + 70 °C per module	0.5 W at + 70 °C per module
Temperature Coefficient (Typical)			± 500 ppm/°C	± 150 ppm/°C
Limiting Element Voltage			350 V	350 V
Contact Resistance Variation	Linear Law		1 %	2 % or 3 Ω
End Resistance (Typical)			2 Ω	2 Ω
Independent Linearity (Typical)	Linear Law		± 5 %	± 5 %
Insulation Resistance			10 ⁶ MΩ min.	10 ⁶ MΩ min.
Dielectric Strength			1500 V _{RMS} min.	1500 V _{RMS} min.
Attenuation			90 dB max. and 0.05 dB min.	-
Mechanical Rotational Life			50 000 cycles	50 000 cycles

* Consult Vishay Sfernice for other ohmic values

MECHANICAL SPECIFICATIONS PA11 AND P11

Mechanical Travel:	300° ± 5°
Operating Torque (typical):	
Single and Dual Assemblies:	
3 mm, 4 mm (1/8") dia. Shafts	0.5 to 1.3 Ncm max. (0.7 to 1.8 oz-inch max.)
6 mm (1/4") dia. Shafts	0.7 to 1.5 Ncm max. (1 to 2.1 oz-inch max.)
Three to Seven Modules (per module):	0.2 to 0.3 Ncm max. (0.3 to 0.45 oz-inch max.)
End Stop Torque:	
3 mm, 4 mm (1/8") dia. Shafts	25 Ncm max. (2.1 lb-inch max.)
6 mm (1/4") dia. Shafts	80 Ncm max. (6.8 lb-inch max.)
Tightening Torque:	
6 mm, 7 mm (1/4") dia. bushings	150 Ncm max. (13 lb-inch max.)
10 mm (3/8") dia. bushings	250 Ncm max. (21 lb-inch max.)
Weight	7 g to 9 g per module (0.25 to 0.32 oz)

POWER RATING CHART

MULTIPLE ASSEMBLIES

Standard assemblies can comprise up to 7 modules in addition to the shaft and bushing module.

Detents module (CV)

Switch modules (RS or RSI)

Potentiometer modules

Spacer module (EV) to increase the distance between rows of pins from 5.06 mm (0.200) to 10.16 mm (0.400).

Screening module, with ground terminal.

The position of each module is free except the push/push, momentary push which has to be the last module.

LINEARITY - CONFORMITY

The independent linearity (conformity for the non linear laws) is the maximum gap ΔV between the actual variation curve and the theoretical variation curve the nearest to it. The linearity and the conformity are expressed in percentage of the total applied voltage E

$$\text{linearity conformity} = \frac{\pm \Delta V \text{ max}}{E}$$

They are measured over 90 % of actual electrical travel (centered).

On request linearity can be guaranteed in linear law.

For example: linearity ± 2 % + J 145 option (see ordering procedure).

INTERLINEARITY - INTERCONFORMITY

It is the maximum deviation between the actual voltage outputs of 2 or more pot modules in the same assembly. It is expressed as a percentage of the total applied voltage, or in dB attenuation.

Interlinearity is measured between 2 pot modules, over 10 to 90 % of the attenuation.

The interlinearity or interconformity is expressed as a percentage of the total applied voltage :

$$I \% = \frac{ICI}{E}$$

Or in decibels by comparison between outputs V1 and V2

$$I \text{ dB} = 20 \log \frac{V_1}{V_2}$$

PERFORMANCE				
TESTS	CONDITIONS	TYPICAL VALUES AND DRIFTS		
			P11 CERMET	PA11 CONDUCTIVE PLASTIC
Load Life	1000 hours at + 70 °C (90°/30')	total resistance shift	± 2 %	± 10 %
		contact resistance variation	± 4 %	± 5 %

Shock	50 G 11 ms 3 shocks - 3 directions	total resistance shift resistance setting change	± 0.2 % ± 0.5 %	± 0.2 % ± 0.5 % typical
Vibration	10 - 55 Hz 0.75 mm or 10 G 6 hours	total resistance shift voltage setting change	± 0.2 % ± 0.5 % typical	± 0.2 % ± 0.5 % typical

OPTIONS

MODULES : RS ON/OFF SWITCH RSI CHANGEOVER SWITCH

The position of each module is free.

RS and RSI rotary switches are housed in a standard P11 module size 12.7 x 12.7 x 5.08 mm (0.5" x 0.5" x 0.2"). They have the same terminal styles as the assembled electrical modules.

CAUTION: Because of the switch actuation travel, the potentiometer total electrical travel is reduced to $240^\circ \pm 10^\circ$

Switch actuation is described as seen from the shaft end.

D: means actuation in maximum CCW position

F: means actuation in maximum CW position

The switch actuation travel is 25° with a total mechanical travel of $300^\circ \pm 5^\circ$.

MODULES : PUSH/PUSH SWITCH RSPP MOMENTARY/PUSH SWITCH RSMP

The switches are manufactured by ITT, F.U. series (NE18 series available on request).

They have to be the last element of potentiometer and are linked to electrical module by an interface.

RSPP and RSMP switches are available only with P11/PA11 T-Q or 7 series not with P11/PA11 V or 2 series.

Options :

2 reversing switches F2 4 reversing switches F4

6 reversing switches F6 8 reversing switches F8

Available with shafts R (T), G (Q), CR (7) others shafts on request.

Not available with panel sealed option.

Number of modules before the switch limited to 3 modules.

VALLEY DETENTS

The valley detents mechanism is housed in a standard P11 module. Up to 21 detents position available.

Count detents as follows : 1 for CCW position, 1 for full CW position, plus the other positions forming **equal resistance increments** (linear taper) - **not equal angles**.

Available now : CVID - CVIF - CVIM
CV3 - CV11 - CV21

RSD SINGLE POLE SWITCH, NORMALLY OPEN

In full CCW position, the contact between 1 and 3 is open. It is made at the beginning of the travel in CW direction.

RSF SINGLE POLE SWITCH, NORMALLY OPEN

In full CW position, the contact between 1 and 3 is open. It is made at the beginning of the travel in CCW direction.

RSID SINGLE POLE CHANGEOVER

In full CCW position, the contact is made between 3 and 2 and open between 3 and 1. Switch actuation (CW direction) reverses these positions.

RSIF SINGLE POLE CHANGEOVER

In full CW position, the contact is made between 1 and 2 and open between 1 and 3. Switch actuation (CCW direction) reverses these positions.

RSPP F2 : PUSH/PUSH SWITCH WITH TWO REVERSING SWITCHES

Idle position : the contact is made between 1 and 2 and a and b. It is open between 2 and 3 and b and c.

Pushed position: the contact is made between 2 and 3 and b and c. It is open between 1 and 2 and a and b.

Not available on P11V and P11-2.

On request for P11Q and P11-7.

SWITCH MODULES

SWITCH SPECIFICATIONS		
MODEL	RS - RSI	F2 to F8
Switching Power max.	62.5 VA \cup 15 VA =	50 VA \cup
Switching Current max.	0.25 A 250 V \cup 0.5 A 30 V =	0.5 A \cup
Max. Current Through Element	2 A	2 A
Contact Resistance	30 m Ω	100 m Ω
Dielectric Strength	Terminal to Terminal	1000 V _{RMS}
	Terminal to Bushing	2000 V _{RMS}
Max. Voltage Operation	250 V \cup 30 V =	250 V \cup
Insulation Resistance Between Contacts	10 ⁶ M Ω	10 ³ M Ω
Life at P max.	10 000 actuations	100 000 actuations
Minimal Travel	25°	3.3 mm to 4.7 mm
Operating Temperature	- 40 °C to + 85 °C	- 20 °C + 70 °C

ELECTRICAL DIAGRAM

CENTER CURRENT TAP "J"

The extra terminal is a solder lug connected at 50 % of electrical travel and situated in the potentiometer module opposite the terminals.

Center tap short circuit 11° of travel.

SHAFTS (see Ordering Information)

The shaft lengths are always measured from the mounting face.

Standard shafts are designed by a letter code (one or two digits). Shafts slots are aligned to $\pm 10^\circ$ of the wiper position.

SPLINED SHAFT "I"

CONCENTRIC SHAFTS

The CC or 0 or 77 concentric shaft versions allies the total flexibility of the P11/PA11 modular system to the advantage of having two separate shafts.

The outer 6 mm or 1/4" or 1/8" dia. shaft drives the modules situated immediately behind the panel, before the spacer module.

The inner 3 mm or 1/8" or 0.07" dia. shaft drives the modules situated after the spacer module.

Spacer is available with a choice of two spacer thickness :

5.08 mm designations: CC, 0, 77

2.54 mm designations: CC-3, 0-3, and 77-3. See dimensional drawings on second page of this data sheet

CUSTOM SHAFTS

When special shafts are required - flat, threaded ends, special shaft lengths, etc. a drawing is required.

FLATTED SHAFT

PA11/P11 - 2 = VHM

PA11/P11 - 7 = CDM

Fig. 9

NEUTRAL MODULE "EN"

Neutral or screen module is housed in a standard P11 module. It is used as a screen between two electrical modules.

The leads can be connected to ground.

LOCATING PEGS (Anti-rotation lugs)

The locating peg is provided by a plate mounted on the bushing and positioned by the module sides. Four set positions are available, clock face orientation: 12, 3, 6, 9.

All P11 bushings have a double flat. When panel mounting holes have been punched accordingly, an anti-rotation log is not necessary.

CODE	P11 - PA11					EFFECTIVE HIGH PEG
	VERSION	T-7	V-CC	Q	2-0
